Summary

Self-motivated and dedicated IoT enthusiast with excellent problem-solving skills and a strong commitment to continuous learning. Known for adaptability, teamwork, and delivering quality results with responsibility.

Education

- **MADHAV INSTITUTE OF TECHNOLOGY AND SCIENCE GWALIOR** 09/2023 - 05/2027
B. Tech (INTERNET OF THINGS), 2023 **CGPA: 8.51**
Coursework: Data Structure, Design and Analysis of Algorithms Operating System, Cloud Computing, DBMS.

Key Achievements

- ❖ **IoT Edge Club • Treasurer**
 - Managed the club's financial planning, budgeting, and resource allocation in support of workshops, events, and technical activities.
 - Ensured that all records were transparently kept and all funds were managed efficiently, thus enabling the club to conduct more events while increasing the level of student participation.
- ❖ **OBE Coordinator, MITS College**
 - Organized the OBE activities through collection, organization, and analysis of course outcome (CO) and program outcome (PO) data from faculty.
 - Assisted departments with the mapping of outcomes, record maintenance, and report preparations for accreditations and academic reviews.
- ❖ **IEEE Research Publication • Author & Presenter**
 - Published first research paper titled "A Real-Time Machine Learning Framework for Financial Fraud Detection Using Autoencoder-Based Anomaly Analysis" in IEEE MPCON 2026, available on IEEE Xplore.
 - Achieved Accuracy: 98.6% | F1-Score: 97.3%, and presented findings at the IEEE Madhya Pradesh Conference.
- ❖ **NPTEL Certification • Elite Silver (Industry 4.0 & IIoT)**
 - Successfully completed NPTEL Online Certification on Introduction to Industry 4.0 and Industrial Internet of Things offered by IIT Kharagpur under the Ministry of Education, Government of India.
 - Scored 78% overall and earned Elite Silver recognition among 20,000+ certified learners worldwide.

Skills

- Data analytics, Data Visualization, Python, C++, MySQL, Thing-speak, Blynk IOT, Node-RED, ML.

Certification

- Getting started with AI on Jetson nano, Operating system fundamentals Nptel Course, Computer architecture Nptel course.

Experience

- **Department IoT Experiment Kit Developer — MITS College.**
- I created an IoT experiment kit for the department to help students learn faster and make hands-on lab work easier and more engaging.

Project

1. **IoT & Machine Learning-Based Smart Multi-Sensor Water Quality Monitoring System (ESP32).**
Successful Outcome: Achieved real-time water quality prediction with over 90% accuracy through on-device Edge ML and remote IoT monitoring.
 2. **Automatic Smart Street Light System (Arduino Uno).**
Successful Outcome: Automated street lighting to improve energy efficiency and reduce unnecessary power consumption.
 3. **Full-Wave Rectifier with Center-Tapped Transformer + Capacitor Filter**
Successful Outcome: Produced a stable DC output by minimizing ripple voltage for reliable power supply.
 4. **Online Food Delivery System – Software/Web Platform.**
Successful Outcome: Developed a user-friendly web platform that streamlined online food ordering and order management.
- Developed multiple engineering projects including an IoT & ML-based water quality monitoring system, an automatic smart street light system, and a full-wave rectifier with a capacitor filter. Also created an online food delivery web platform with user login, menu display, and order management.
